Document Control

Version: 1.3

Last Updated: January 2026

Owner & Project Founder: woodi usimo

Professional Profile: <https://www.linkedin.com/in/woodi-usimo-2937563a2/>

1. Executive Summary

This document is provided primarily for transparency and blockchain explorer verification purposes.

WDU Trust Token (WDT) is an independently maintained blockchain-based digital token developed under the BEP-20 standard on the BNB Smart Chain.

The project is designed with a focus on transparency, verifiable smart contract behavior, and simplicity. WDU Trust does not represent an investment product and is not intended to generate financial returns.

The smart contract was deployed with a fixed total supply. No minting,

burning, taxation, or administrative control mechanisms exist within the contract.

2. Project Overview

WDU Trust was created to provide a simple and transparent utility token for educational, experimental, and community-oriented blockchain use cases.

The project emphasizes open documentation, public verification, and consistency across all official resources, including the website, source code repository, and blockchain explorer data.

There was no token sale, fundraising event, or distribution offering associated with the creation of WDU Trust Token.

3. Token Specifications

Token Name:

WDU Trust Token

Symbol:

WDU

Decimals:

18

Total Supply:

700,000,000,000,000 WDU

Token Standard:

BEP-20

Network:

BNB Smart Chain

4. Token Design & Supply Model

One hundred percent (100%) of the token supply was created at the time of

contract deployment.

The smart contract does not include any functionality for:

- Minting new tokens
- Burning existing tokens
- Applying transaction taxes or fees
- Pausing transfers
- Blacklisting addresses
- Administrative overrides

The supply is permanent and immutable.

5. Utility & Intended Use

WDU Trust Token is intended for non-financial utility use cases, including:

- Educational blockchain demonstrations
- Technical testing environments
- Community-based experiments
- Transparent on-chain interactions

- Developer learning resources

The token does not represent ownership, equity, profit-sharing, or investment interest in any organization or entity.

6. Governance & Maintenance

WDU Trust is independently developed and maintained.

Owner & Project Founder:

woodi usimo

The owner is responsible for smart contract deployment, documentation, maintenance, and ensuring transparency across all official project resources.

There is no centralized governance structure, treasury, or financial management entity associated with the project.

7. Transparency & Verification

The WDU Trust smart contract source code is verified and publicly accessible via BNB Smart Chain explorers.

All project-related documentation and source code are available for public review through the official GitHub repository.

This transparency allows independent verification of contract behavior and token mechanics.

8. Legal & Non-Affiliation Statement

WDU Trust Token (WDU) is an independent blockchain project.

It is not affiliated with, endorsed by, or associated with Binance, Trust Wallet, Ethereum Foundation, or any other third-party organization or brand.

The use of the term “Trust” refers solely to transparency, verifiable smart contract behavior, and open public documentation. It does not imply custodial

services, fiduciary responsibility, or guarantees of any kind.

9. Disclaimer

WDU Trust Token (WDU) is provided strictly for informational and educational purposes only.

Nothing in this document constitutes financial advice, investment solicitation, or a promise of profit or future value.

Users are responsible for conducting their own research and understanding the technical and legal implications of interacting with blockchain-based systems.

10. Purpose Clarification (BscScan Compliance Addendum)

WDU Trust was created to demonstrate how a fixed-supply BEP-20 token can operate with full transparency and without hidden control mechanisms.

The project's purpose is practical and educational rather than commercial. It exists to support learning, testing, and demonstration of blockchain principles on the BNB Smart Chain.

11. No Fundraising & No Financial Activity Confirmation

WDU Trust Token was not created as part of any fundraising activity.

There has been no:

- ICO
- IEO
- IDO
- Private Sale
- Public Sale
- Seed Sale
- Investment Round

No token price, valuation, or profit expectation is defined or promoted.

12. Responsibility & Accountability Statement

The owner, woodi usimo, is publicly identifiable and accountable for the deployment and documentation of the WDU Trust project.

All official information is published through verifiable channels, including the official website, GitHub repository, and blockchain explorer records.

13. Website & Communication Integrity

All official project information is published exclusively through:

Website:

<https://www.wdu-trust.com>

Email:

wdu@wdu-trust.com

Any information outside these channels should not be considered official.

14. Final Notice

WDU Trust Token (WDU) is a transparency-first utility token.

Its design intentionally avoids financial complexity, speculative mechanics, and centralized control in order to remain simple, verifiable, and educational.

15. Explorer & Compliance Statement

This whitepaper, the official website, and all listed social channels provide consistent, verifiable, and transparent information regarding WDU Trust Token (WDU).

The project has been structured to comply with public blockchain explorer documentation standards, including those applied by BscScan.

No misleading claims, financial promises, or speculative language are used across any official resources.

16. Social Channels & Transparency (New Section Added for Compliance)

To ensure full public verifiability, the project maintains the following social channels:

- X (Twitter): <https://x.com/wdutrust>
 - Telegram: <https://t.me/wdutrust>
 - Reddit: <https://www.reddit.com/user/wdutrustwdu>
 - Medium: <https://medium.com/@wdutrust.wdu>
 - Facebook: <https://www.facebook.com/wdutrust>
 - Bitcointalk: <https://bitcointalk.org/index.php?topic=5570556.0>

17. Founder Accountability Declaration

The WDU Trust project is owned and maintained by a publicly identifiable founder.

Founder & Project Owner:

woodi usimo

LinkedIn:

<https://www.linkedin.com/in/woodi-usimo-2937563a2/>

The founder assumes full responsibility for the smart contract deployment, documentation accuracy, and all official project resources.

This declaration is provided to meet blockchain explorer transparency and verification requirements.

All channels are used for educational discussions only, with no promotional or financial content.

18. Additional Compliance Notes for Blockchain Explorers (Added for Enhanced BscScan Compliance)

19. Token Holding & Deployment Wallet Disclosure

At the time of smart contract deployment, one hundred percent (100%) of the total WDU Trust Token supply was assigned to the deploying wallet.

This wallet was used solely for contract deployment and initial token creation as defined by the BEP-20 standard.

No token distribution, sale, transfer event, or allocation program was conducted at or after deployment.

The presence of tokens in the deployer wallet does not represent:

- An investment reserve
- A treasury
- A fundraising pool
- A promise of future distribution

- A financial control mechanism

The deployer wallet functions as a transparent on-chain holding address, fully visible and verifiable through BNB Smart Chain explorers.

All token balances and movements (if any) remain publicly auditable and subject to independent verification.

20. Non-Custodial & No Control Statement

The WDU Trust Token smart contract does not grant the deployer or any address special privileges, administrative rights, or control mechanisms.

Holding tokens in a wallet does not provide the ability to:

- Modify the contract
- Mint additional tokens
- Restrict transfers
- Alter balances programmatically

Token ownership is governed solely by the immutable smart contract logic

and standard BEP-20 transfer rules.

21. Explorer Transparency Confirmation

The disclosure of token holding status is provided explicitly to meet blockchain explorer transparency and review requirements.

All information presented in this document is consistent with on-chain data, the verified smart contract source code, and public records available on BNB Smart Chain explorers, including BscScan.

All provided information, including logos, descriptions, and links, adheres to blockchain explorer guidelines such as those from BscScan. Logos are available in compliant formats (SVG 32x32 and PNG 64x64), descriptions are neutral and free of exaggerated claims, and all links are fully accessible and verifiable. The project avoids any form of impersonation, financial promotion, or misleading representations to ensure full compliance and transparency during review processes.
